

Press Release

Schaffhausen (CH) / Salach (D), October 2017

Mold Dock

The PRIAMUS Mold Change System

Rapidly diminishing product life cycles and increasing variant diversity lead to declining lot sizes which force manufacturers to change their molds more often.

The PRIAMUS Mold Dock mold change system minimizes the effort of connecting mold sensors through central non-interchangeable signal contacts which are secured by a locking system and encoding pins.

Both halves of the system provide an ergonomic and precise guiding when connected, as well as a fast and easy locking by simple turning of the operating handle.

The connector inserts for maximum 8 pressure or temperature signals are designed as robust end to end shielded aluminum housings withstanding a high number of plug cycles at high temperatures and high vibrations.

The inserts are also available separately for individual fully automated solutions.
